

Amendments to Specification:

Please replace the paragraph beginning on page 2, line 28 with the following amended paragraph:

FIG. 4 is a ~~[[block diagram]]~~ flow chart of the general methodology of the
5 integrated system for monitoring remote objects according to the present invention.

Please replace the paragraph beginning on page 4, line 15 with the following amended paragraph:

Controller 6 preferably is implemented for user monitoring of one or more objects
10 2 using conventional computer, workstation or functionally equivalent digital processing
equipment and/or software. Contemplated examples of controller 6 functionality may
include following, if configured to operate as specified herein: Network Computer-type
product from Oracle, WebTV-type product from Microsoft, Pilot-type product from
15 ~~[[Cisco]]~~ 3Com or substantially compatible network processor products thereto. Publicly
accessible product functionality and interface specifications, including hard-copy or on-
line published documents therefor, for such products are hereby incorporated by
reference.

*Please replace the paragraph beginning on page 7, line 28 with the following amended
20 paragraph:*

Optionally, detectors 3 may be coupled to control mechanism for adjusting
detector operation, such as ~~[[focus,]]~~ tilt, pan, focus, etc., as well as means for causing
multiple neighboring detectors to observe and track common object or object set, thereby
obtaining various comparative surveillance data. Further optionally, un-coupled or non-
25 functional but obvious "decoy" detector/server sites may be installed at select locations to
provide deterrent observation effect as well reduce network traffic and overall cost.
However, hidden detector/server site may be provided to observe object activity
proximate to decoy site.

Please replace the paragraph beginning on page 9, line 20 with the following amended paragraph:

Further, as described herein, control software 66, preferably including one or more
5 modules described hereunder and provided in whole or in part in storage 49 for execution
by processor 48 in target unit 4 and/or controller 6, to enable communications 161
between such fixed and mobile components, maintain object data status and mapping
information 162, track and correlate movement activity from different sources 163,
maintain system security and access 164, manage object-related electronic transactions
10 165, ~~[[diagnosis]]~~ diagnose and analyze object performance, provide data reporting, and
analyze visual object information 168.

Please replace the paragraph beginning on page 35, line 14 with the following amended paragraph:

15 Although the principles of this invention ~~[[has]]~~ have been illustrated in the
preferred embodiment in accordance to a surveillance application, it is intended that the
principles of this invention to be also applied to other applications, such as patient
monitoring, person, vehicle, or property tracking and monitoring.

20 *Please replace the paragraph beginning on page 35, line 19 with the following amended paragraph:*

Thus, the foregoing described embodiments of the invention are provided as an
illustration and description. It is not intended to limit the invention to the precise form
described. Other variations and embodiments are possible in light of the above teaching,
25 and it is thus intended that the scope of the invention not be limited by the detailed
description, but rather by the claims as follow.
